

*Maturing piercing
tissue fistula*

*Healthy early
epithelialisation*

*Leaching polymer
extractable molecules*

*Leaching polymer
extractable molecules*

*Delayed-type
contact dermatitis*

*Persistent localized
inflammation*

*Minimal foreign-body
granuloma*

Polymer extractables leach into tissue fluid, triggering delayed-type contact dermatitis or persistent inflammation over time.

PP-R MINIMIZES FOREIGN-BODY GRANULOMA RISK
