

A diagram illustrating laser treatment on a tattoo. A large black arrow points from the top left towards a tattooed area. The tattooed area is represented by a series of concentric black arcs. A starburst shape indicates the point of laser impact. A white arrow points from the text 'Treat around the tattooed regions.' to the area surrounding the tattoo. Another white arrow points from the text 'Use faster and broader handpiece passes.' to a circular area around the tattoo. The background is yellow.

**Do not focus laser over ink.
Tattoo pigment converts
light into heat.**

**Treat
around the
tattooed regions.**

**Use faster and
broader
handpiece passes.**

**High-power laser therapy increases the likelihood of superficial thermal accumulation.
Move deliberately to manage surface exposure.**
