

1. Expanding abdominal wall
2. Stretched skin surface
3. Changed piercing angle
4. Mechanical stress on fistula

1. Expanding abdominal wall
2. Stretched skin surface
4. Mechanical stress on fistula
5. Increased migration risk
6. Biocompatible polymer retainer

Expanding tissue places mechanical stress on existing fistulas, increasing the risk of migration and rejection.
REPLACE METAL JEWELLERY WITH FLEXIBLE PTFE RETAINERS.
